

# MacroTrac™ Application Profile: Event

## BAYOU COUNTRY SUPERFEST 2011

### Safe, Durable, and Protective of Valuable Turf

In May 2011, MacroTrac temporary flooring products from Macro Plastics were featured at the Bayou Country Superfest held in Baton Rouge, Louisiana. The festival included some of the biggest names in country music performing for tens of thousands of fans over Memorial Day weekend. In preparation for the staging equipment and attendees, over 80,000 square feet of MacroTrac was installed at the LSU Tiger Stadium.

#### ⇒ I-TRAC™

At Superfest, the heavy-duty I-Trac functioned as the base beneath the stage. I-Trac allowed venue organizers to navigate the staging equipment into the stadium using heavy cranes, without damaging the arena turf beneath it. I-Trac's unique interlocking design and extreme load capacity provided the strength needed to support the extremely heavy cranes and equipment.

#### ⇒ SUPA-TRAC™

Beyond the stage, Supa-Trac was installed across a majority of the stadium's grass field. The slip resistant surface and durable panels not only provided venue attendees with a safe walking surface but also protected the stadium's valuable turf. The easy installation of Supa-Trac allowed the event organizers to set-up all of the seating in a quick and efficient manner.

The MacroTrac product family is a full line of durable and environmentally-friendly portable plastic flooring and roadway products which are ideal for military, aviation, event, and construction applications.
