The MacroTrac™ Solution for Construction and Utility Industries

I-Trac™

Supa-Trac™

Economical and environmentally friendly matting solutions. Rent or Buy.

The days of building permanent roads and structures to support temporary job sites are over.

MacroTrac Matting Systems provide an effective solution for construction and utility companies that need temporary roadways or construction pads which are durable, easy to transport, and environmentally friendly. MacroTrac matting products are designed to improve the ability to function in remote areas, support equipment on soft or uneven ground and allow faster and easier access to resources.

Microsoft Project

Why Choose MacroTrac? MacroTrac mats are priced lower than most other matting products and provide functionality and flexibility at a greater degree. I-Trac is the only mat with a weight capacity up to 86,400 lbs/ft² that is available in manageable panels, with each one weighing only 38 pounds. Larger matting products can cover as much as 400 ft², which can create a greater negative impact if the mat becomes damaged. Larger, more expensive mats can be seen as overkill on about 90% of job sites.

SWPPP Guidelines

MacroTrac matting solutions help you meet the EPA's requirements when implementing a Stormwater Pollution Prevention Plan (SWPPP) in three main areas:

Minimization of Foreign Materials:

Just one truckload of MacroTrac panels is equivalent to 8 dump trucks full of gravel. Using MacroTrac products for temporary roads will reduce time, cost and clean-up efforts.

Dust Minimization:

MacroTrac roadways and construction pads will help reduce the amount of dust and dirt in the air.

Reduction of Sediment Track-Out:

MacroTrac roadways cover the dirt and mud that would otherwise get stuck in truck tires, eliminating the risk of tracking materials from site to site.

Better performance, less impact.

I-Trac and Supa-Trac are lightweight and portable products that can be used in environmentally sensitive or remote areas that may have inhospitable or unsafe ground. Both systems can be deployed manually and installed quickly without the use of special tools.

→ **SUPA-TRAC** is a heavy duty roadway and flooring system that can be used for helipads, staging areas for lightweight equipment, walkways, and underneath tents.

- Supa-Trac supports load capacities up to 36,000 lbs./sq. ft.
- With compact panels that are 2.26 sq. ft. per piece, a 48' flatbed can carry 21,696 sq. ft. per truck.

→ **I-TRAC** is a state-of-the-art, professional-grade, modular infrastructure system that can be used to support extreme loads and equipment over virtually all ground conditions.

- I-Trac can be deployed at a rate of 500 sq. ft. per man-hour manually and potentially even faster with machine deployment.
- Each I-Trac panel covers 8.47 sq. feet, weighs only 38 pounds, and has an extreme strength-to-weight ratio with a load capacity of up to 86,400 lbs./sq. foot.
- Because of the compact panel size, transport capacity is tripled when compared to other large mat products. A 48' flatbed can carry 9,655 sq. ft. per truck.

Rapid Deployment and Extraction.

MacroTrac mats are easy to install. A foundation of I-Trac can be laid quickly and efficiently at a new construction sites. Once installed, it is immediately available for heavy equipment usage. Our experienced MacroTrac Team have the knowledge and expertise required to fully maximize job success with proper training on the most effective use of the product. Once a site is dismantled, MacroTrac mats can be picked up, shipped to, and reused at another site.

MacroTrac Heavy Duty Products

	Panel Size US (inches)			Panel Size Metric (millimeters)			Weight per Panel		Area per Panel		Shipping (Ft ²)		Static Compression Capacity*
	L	W	H	L	W	H	Lbs	Kg	Ft ² /Pc	M ² /Pc	53' Trailer	48' Flatbed	Lb/Ft ²
Supa-Trac	38.0	11.0	1.4	965	279	36	4.4	2.0	2.26	0.21	21,696	21,696	36,000
