## The **MacroTrac™** Solution for Aviation

Economical and environmentally friendly matting solutions.

I-Trac™

Supa-Trac™

## MacroTrac Temporary Roadways and Aviation Matting Solutions

Provide an effective and aesthetically pleasing surface for helipad landings, and airline tarmacs. Even the heaviest-duty MacroTrac temporary roadway and mat systems are light enough to be “air portable and manually deployable”. The professional-grade products can be installed and extracted quickly, creating a safe, secure and electrically insulated flat surface for aircraft in both tarmac or helipad applications.

**Why Choose MacroTrac?** MacroTrac Aviation mats are priced competitively to other mats. They also consistently out-perform, while providing functionality and flexibility unparalleled in the industry. You will not be disappointed with the ease of installation, the durability, and the versatility of MacroTrac Aviation matting.

## Better performance, more flexibility, less impact.

Supa-Trac and I-Trac are durable, yet lightweight, portable roadways. They are used to create tarmacs, helipads, and aviation hanger flooring. Both systems can be deployed manually and installed quickly without the use of special tools.

**SUPA-TRAC** has been used to provide accessibility to many areas needing a stable surface.

- Easy to install, lightweight (each panel weighs 4.4 lbs) but has a load bearing capacity of 36,400 Lbs per ft<sup>2</sup>.
- Supa-Trac does not require special tools or training to install.
- Supa-Trac is the lightest product in the industry that also provides you with a drivable surface. Accessing your site is easy with Supa-Trac due to its unique design.

**I-TRAC** offers the most versatile option for Aviation.

- I-Trac has a load bearing capacity of 86,400 lbs per ft<sup>2</sup> yet each panel weighs only 38 lbs.
- This lightweight, yet heavy duty, manually deployable mat creates an ideal solution for temporary tarmacs, helipads, temporary access roads or flooring inside your hangars.

**Transport** Manufactured in the US. MacroTrac products can be shipped anywhere in the America's quickly and efficiently with greater square footage per truckload than the competition.

- Over 20k ft<sup>2</sup> of Supa-Trac fits on a 48' Flatbed Truck!
- 9,804 ft<sup>2</sup> of I-Trac can fit on a 48' Flatbed (triple the amount of any other heavy duty matting solution)!

MacroTrac temporary roadway and matting solutions have proven to be the most versatile, durable, and affordable solutions in the Aviation market.

Our mats are designed for rapid deployment and extraction as helipad's, flooring for airplane hangers, or as temporary tarmacs. Our aviation matting solutions work over soft and inhospitable ground. MacroTrac's Aviation line offer the customer the ability to drive airplanes, land helicopters, and can accommodate vehicle traffic, making them ideal for temporary tarmac's. The panels feature an interlocking design and are durable, reusable, easy to transport, and environmentally friendly solutions for the aviation industry. Panels can be assembled quickly without special tools and create a contiguous surface with an extreme strength to weight ratio. Our heaviest, manually deployable panels can handle heavy loads up to 86,400 lbs/ft<sup>2</sup>.
